Module Code & Module Title

CS6004NI - Application Development

Assessment Weightage & Type

30% Individual Coursework

Year and Semester

2020-21 Autumn

Student Name: Shasank Shakya

London Met ID: 18029951

College ID: np01cp4a180303

Assignment Due Date: 22th January 2021

Assignment Submission Date: 22th January 2021

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a marks of zero will be awarded.

Acknowledgement

I am very thankful for my teachers Dhruba Sir and Krishab Sir for their support throughout this semester. As I have gained quiet experience from their teaching and feel a bit adjusted to this field of programming.

1. Introduction

This is our coursework for the first semester of subject Application Development. For this project we have to build a restaurant rating system. For example the user is allowed to rate different services and features of the restaurant like food quality, staff friendliness, etc. All of these feedback data is stored and that data is accessible to the admin. Admin has a different panel where he can review the stored feedback data.

1.1. Tools used

1.1.1. C# programming language

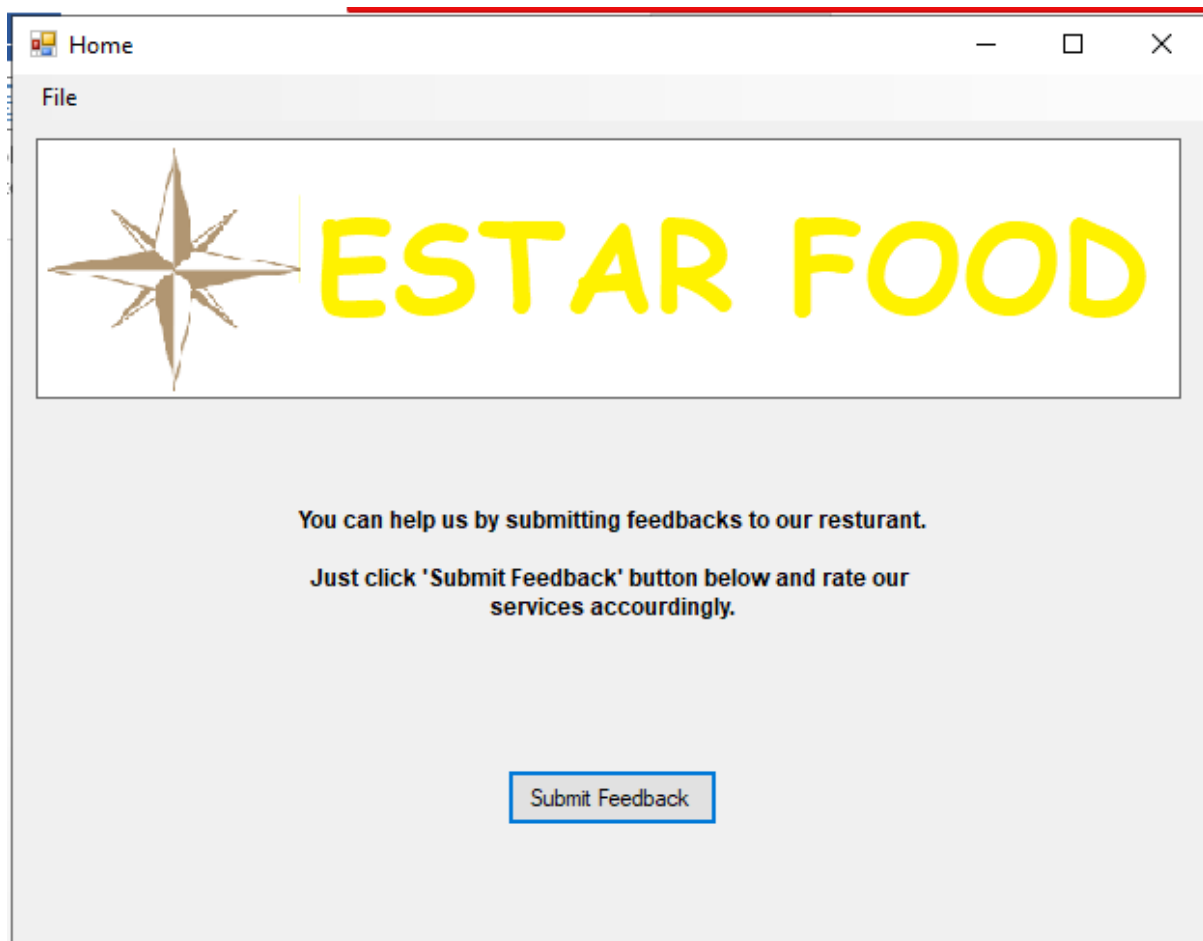

It is build using C# a general purpose programming language which is developed by Microsoft. It supports Object Oriented programming as well. C# is pretty much similar to languages like C and C++. It is also a part of .NET framework which is a huge platform for Web applications and services. (Tutorialspoint, 2021) My project is based in Windows form application.

1.1.2. Database

For database I have not used an exact database but I have used .CSV file. It stand for Comma Separated Values which like its name suggests the data is separated using “,”. (BigCommerce Pty. Ltd., 2003-2021)

2. Manual

1. The program is run and the initial page shows up which looks like this.

2. For users to submit feedback click the “Submit Feedback” button.

3. Then this form appears where user must enter their name and email and use the checkbox grid to rate restaurant features.

The screenshot shows a window titled "userRating" with a "File" menu. Below the menu are two input fields: "Customer Name" and "Email". A timestamp "1/22/2021 9:54:23 AM" is displayed. Below the timestamp is a table for rating criteria. The table has five columns: "Criteria", "Excellent", "Good", "Average", and "Dissatisfied". The rows are "Food Quality", "Staff Friendliness", "Cleanliness", "Order Accuracy", "Restaurant Ambi...", and "Value For Money". Each row has a checkbox in each of the four rating columns. A "Back" button and a "Submit" button are located to the right of the table.

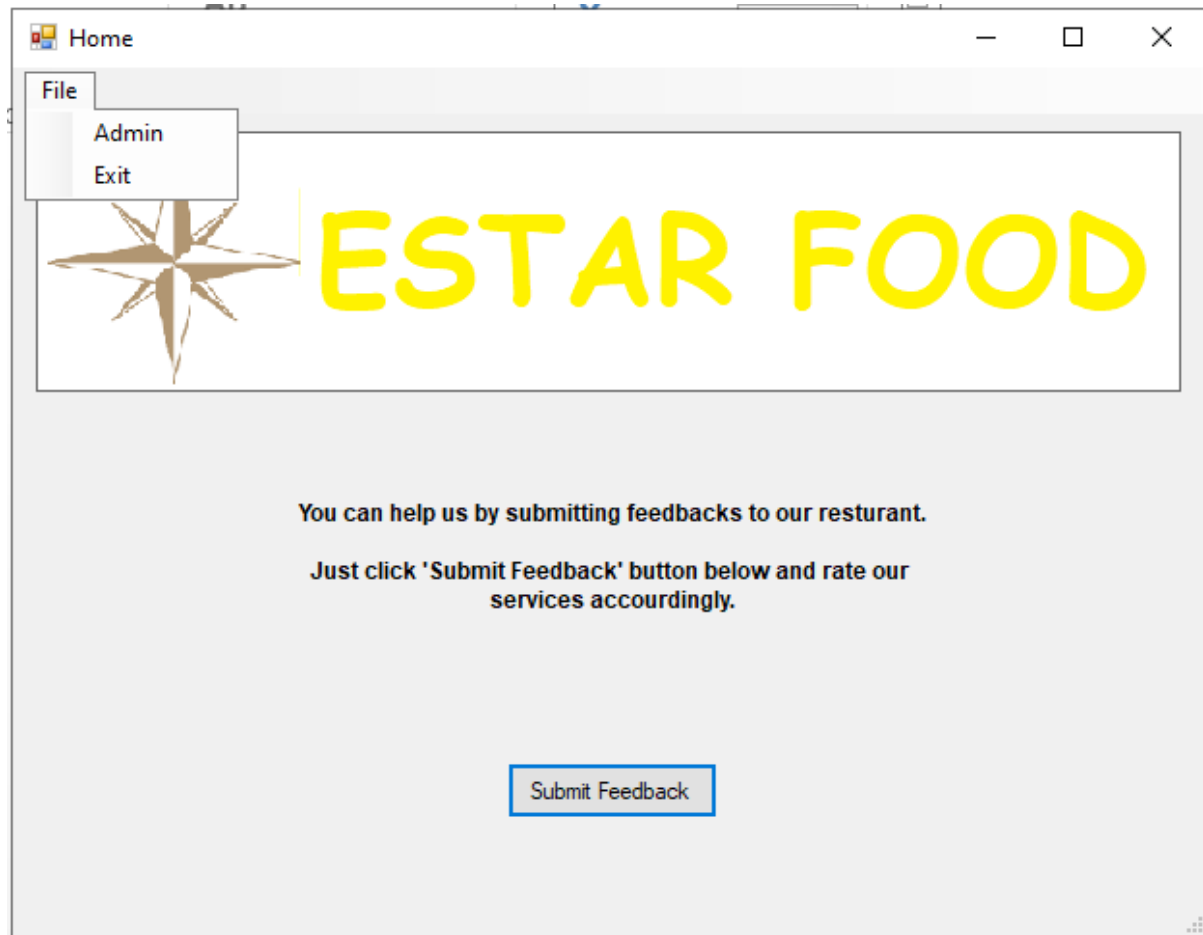

Criteria	Excellent	Good	Average	Dissatisfied
Food Quality	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Staff Friendliness	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Cleanliness	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Order Accuracy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Restaurant Ambi...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Value For Money	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4. Once done click the submit button. Then the data is safely stored.

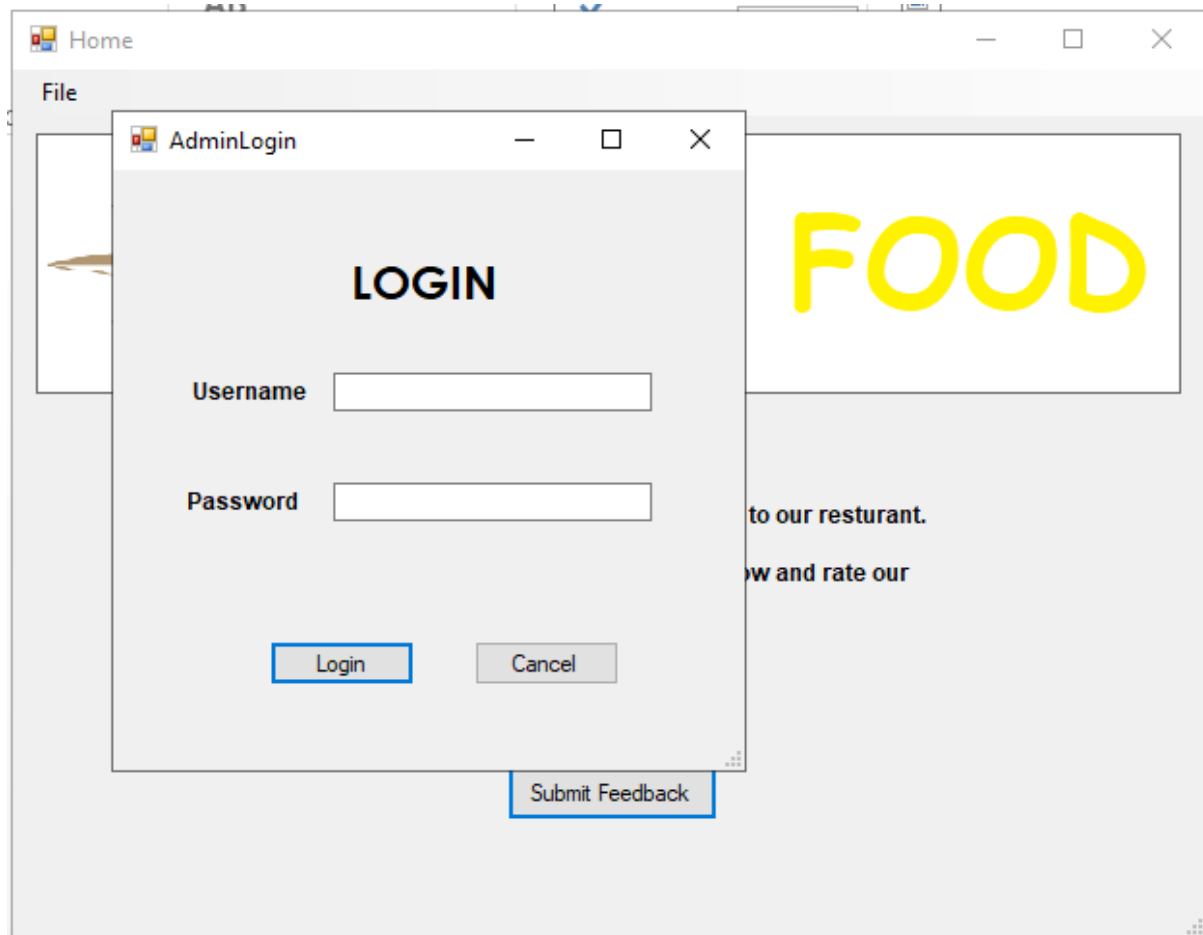

The screenshot shows the same "userRating" window, but now the "Customer Name" field is filled with "John" and the "Email" field is filled with "Cena". The rating table has checkboxes marked: "Food Quality" (Excellent), "Staff Friendliness" (Good), "Cleanliness" (Excellent), "Order Accuracy" (Good), "Restaurant Ambi..." (Average), and "Value For Money" (Good). A dialog box with the text "Thank you for your feedback" and an "OK" button is overlaid on the bottom right of the window.

Criteria	Excellent	Good	Average	Dissatisfied
Food Quality	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Staff Friendliness	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Cleanliness	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Order Accuracy	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Restaurant Ambi...	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Value For Money	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

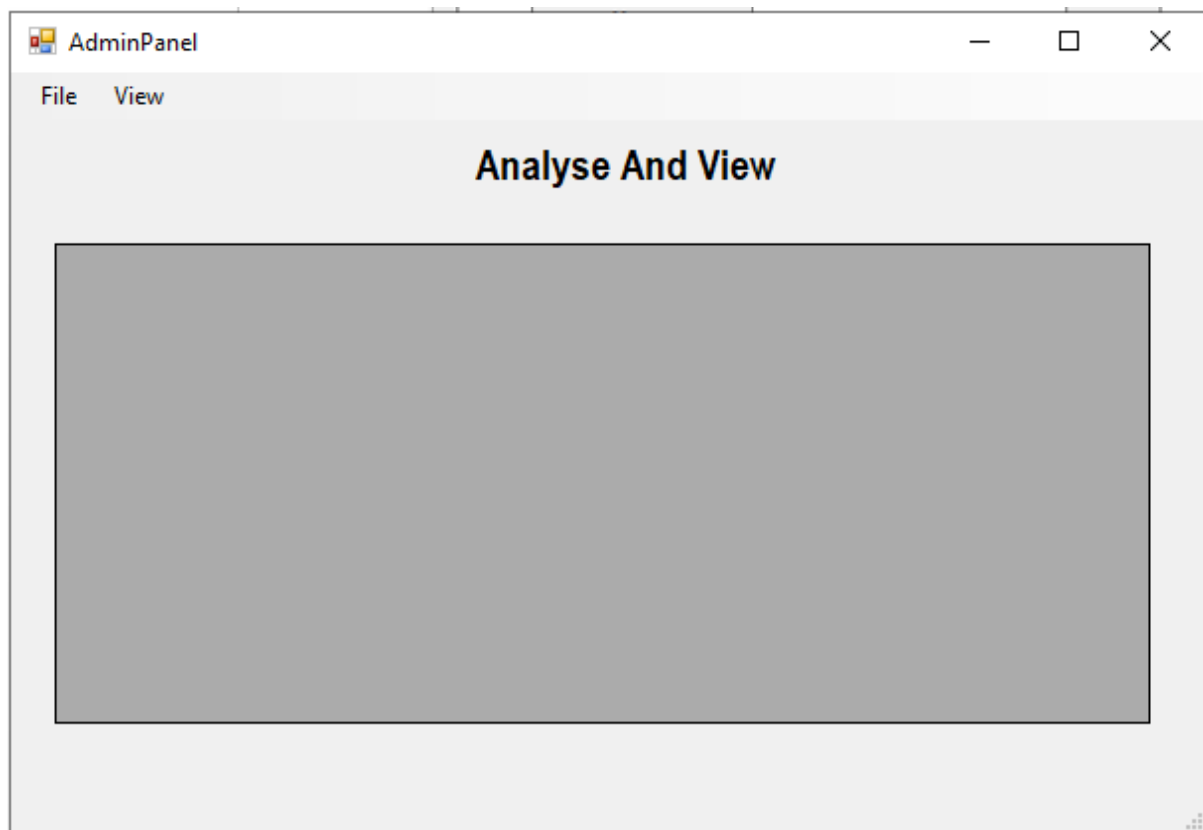

4. For admin, go back to the initial page and there will be a "File" menu at top-left. Click file menu and click "Admin" inside that menu.

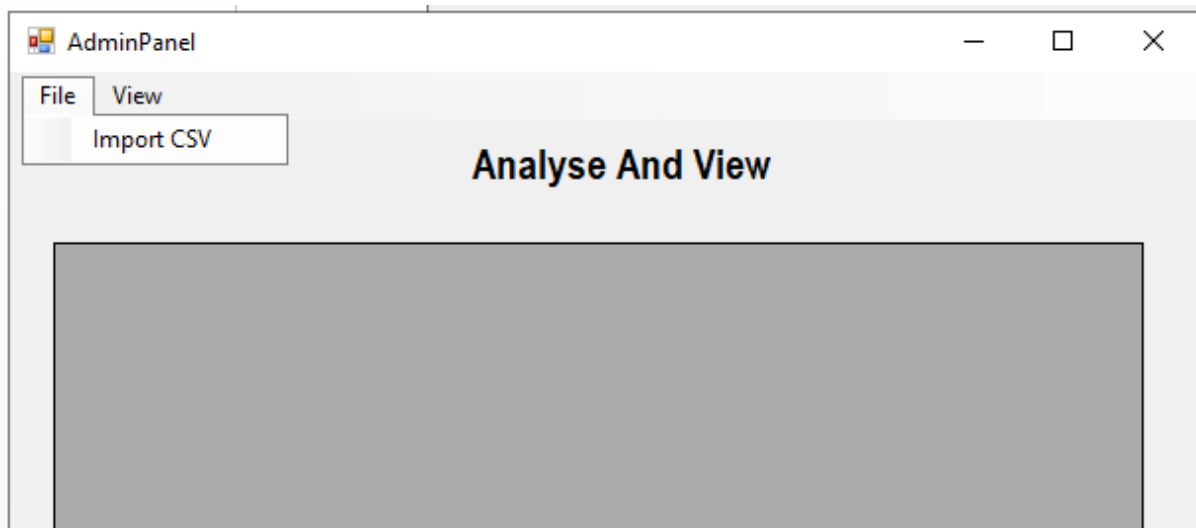

5. Then the user is allowed to login using correct username and password.

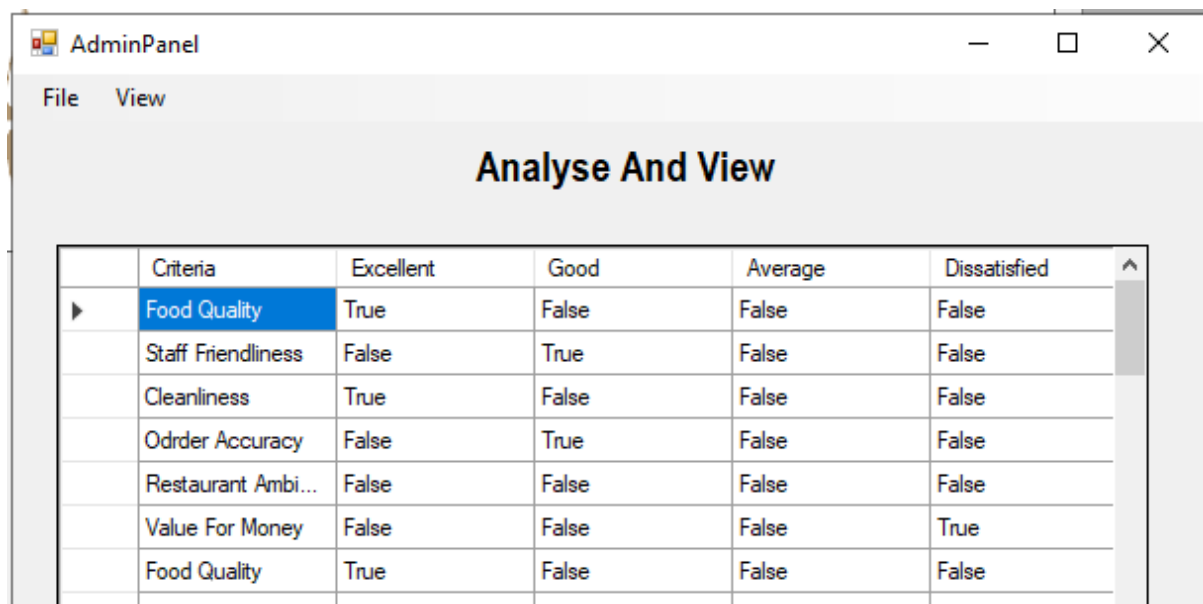

6. Once done the Admin panel shows up where admin is allowed to view all the feedback data.

7. To view the feedback data go to “File” menu again and select import CSV.

8. The imported CSV file shows up in the admin panel grid in a tabular form.

	Criteria	Excellent	Good	Average	Dissatisfied
▶	Food Quality	True	False	False	False
	Staff Friendliness	False	True	False	False
	Cleanliness	True	False	False	False
	Odrder Accuracy	False	True	False	False
	Restaurant Ambi...	False	False	False	False
	Value For Money	False	False	False	True
	Food Quality	True	False	False	False

3. Test Cases

3.1. Customer name validation

Test description: Leaving customer name empty	
Output	Message box pop up saying name is required
Purpose	Stops user from submitting form without name
Result	Pass

3.2. Email validation

Test description: Leaving customer email empty	
Output	Message box pop up saying email is required
Purpose	Stops user from submitting form without email
Result	Pass

The screenshot shows a window titled "userRating". It contains a "File" menu, a "Customer Name" field with the value "sahara", and an empty "Email" field. Below these is a timestamp "1/22/2021 12:19:51 PM". A table for feedback criteria is displayed:

	Criteria	Excellent	Good	Average	Dissatisfied
	Food Quality	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	Staff Friendliness	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	Cleanliness	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	Order Accuracy	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
	Restaurant Ambi...	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
▶	Value For Money	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
*		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Below the table is a large grey rectangular area. A modal dialog box is open with the message "Email is required" and an "OK" button. In the background, "Back" and "Submit" buttons are visible.

3.3. Filing both Name and Email

Test description: Filing both Name and email by the user	
Output	Message box pop up saying thank you for giving feedback
Purpose	Let user know their feedback has been submitted
Result	Pass

Thank you for your feedback

OK

3.4. CSV file check

Test description: check if csv file has been generated or not	
Output	Csv file is saved in the given path
Purpose	To check whether the user feedback data is saved or not
Result	Pass

3.5. Checkbox function check in CSV

Test description: check if csv file has right output based on user feedback data.

Note: ticked checkbox = true

Unticked checkbox = false

Output	Csv file is saved in the given path
Purpose	To make sure that right csv file is being generated for right feedbacks given.
Result	Pass

61	Food Quality	TRUE	FALSE	FALSE	FALSE	1/22/2021 12:19
62	Staff Friendliness	FALSE	TRUE	FALSE	FALSE	1/22/2021 12:19
63	Cleanliness	FALSE	TRUE	FALSE	FALSE	1/22/2021 12:19
64	Order Accuracy	FALSE	FALSE	TRUE	FALSE	1/22/2021 12:19
65	Restaurant Ambiance	FALSE	FALSE	TRUE	FALSE	1/22/2021 12:19
66	Value For Money	FALSE	FALSE	FALSE	TRUE	1/22/2021 12:19

Submit

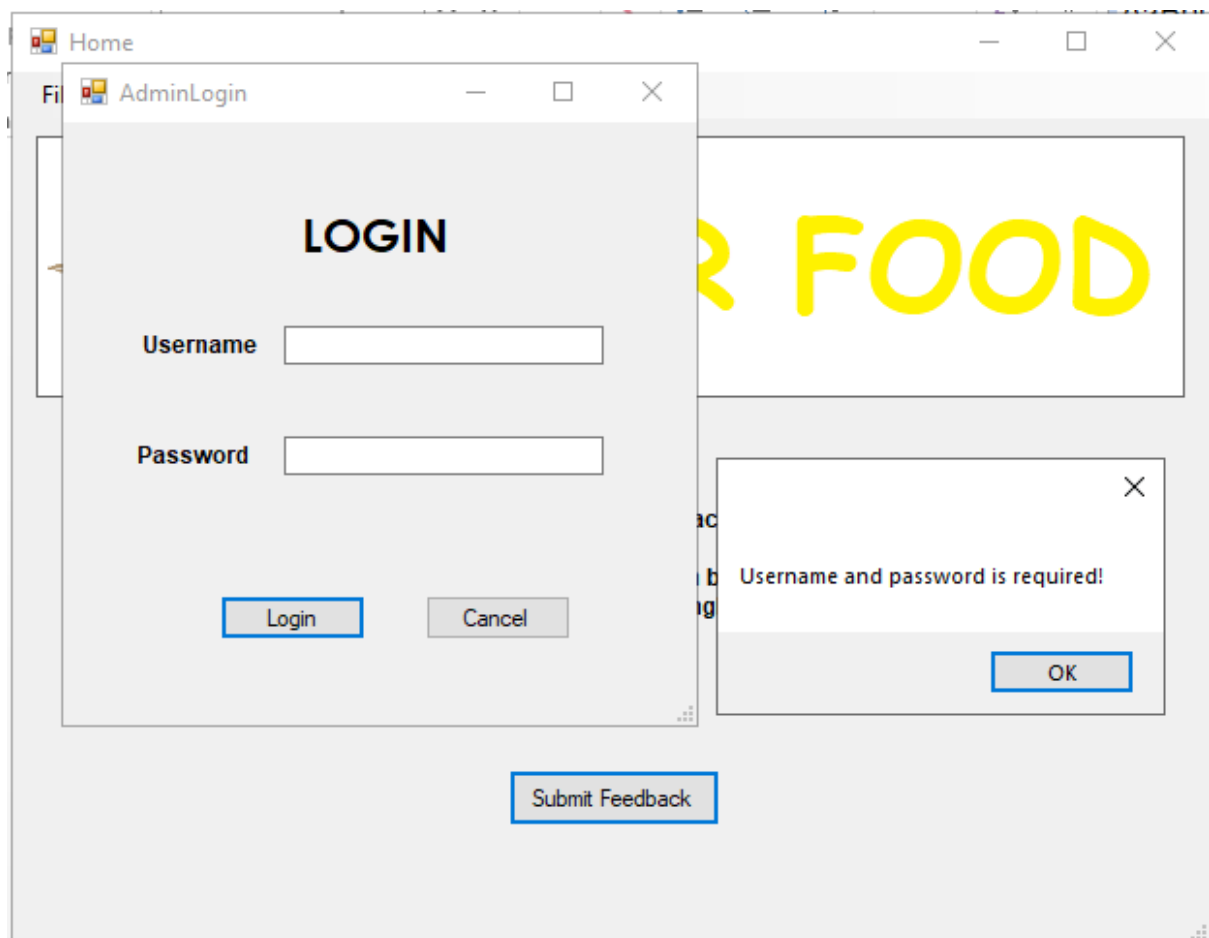

3.6. Admin username/password validation

Test description: Giving wrong username or password in admin login	
Output	Shows pop up box saying wrong user name or password
Purpose	To prevent admin login from false username and password
Result	Pass

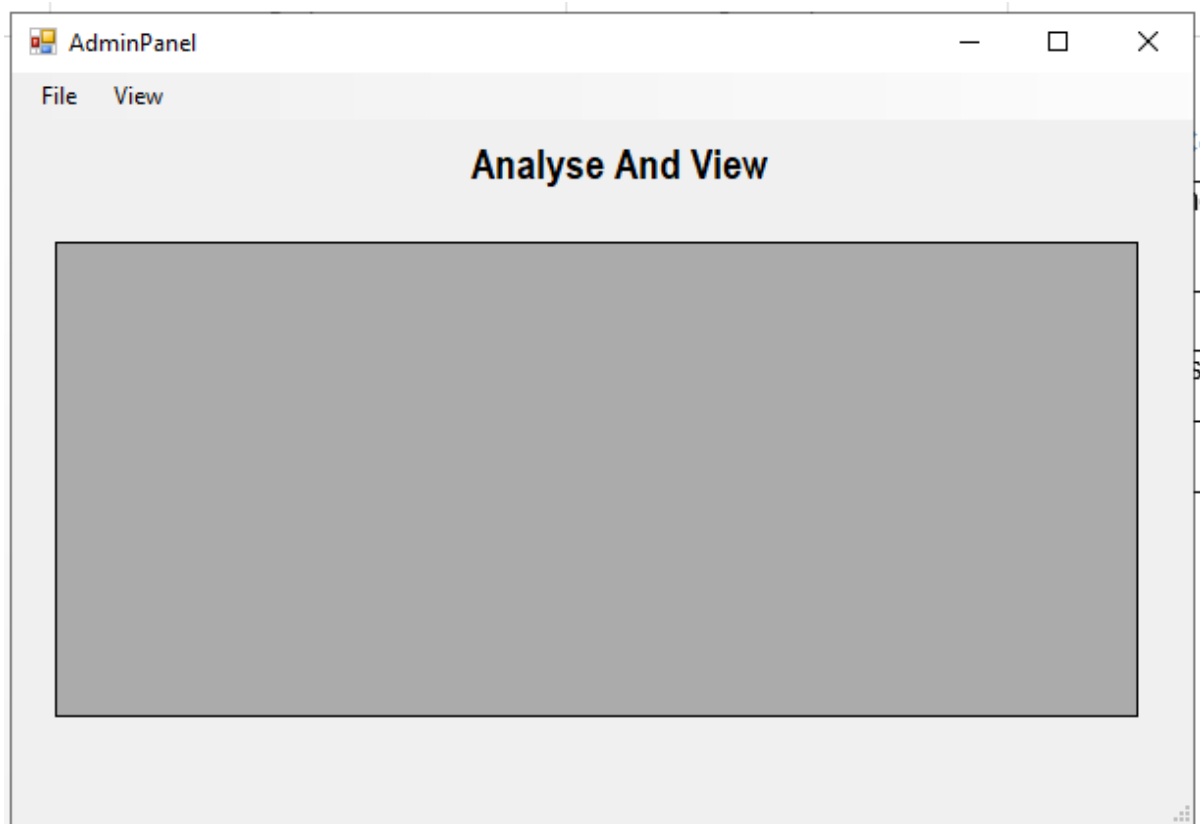

3.7. Admin username/password validation (Empty)

Test description: Leaving username or password empty	
Output	Shows pop up box saying username or password is required
Purpose	To prevent admin login without username and password
Result	Pass

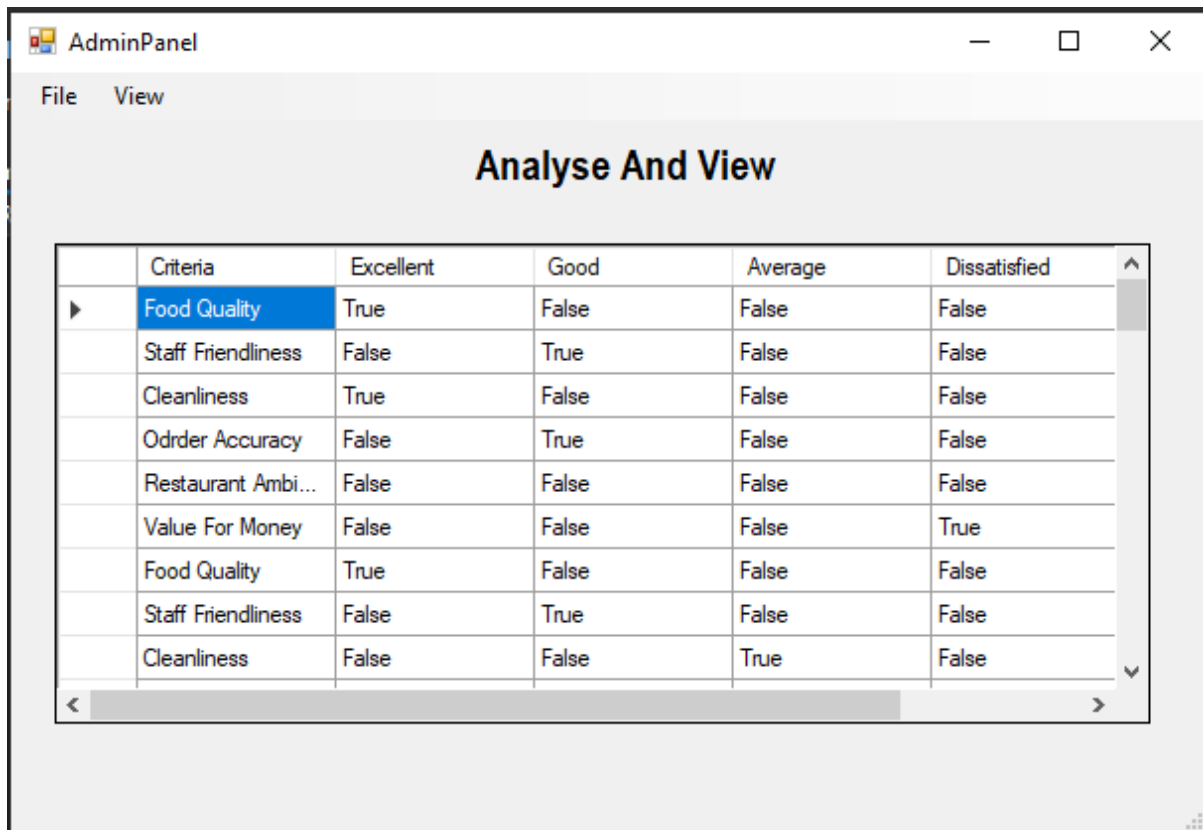

3.7. Admin username/password validation (Correct data)

Test description: Using right password and username for admin login	
Output	Opens admin panel
Purpose	To let admin login with right password and username
Result	Pass

3.8. Import CSV

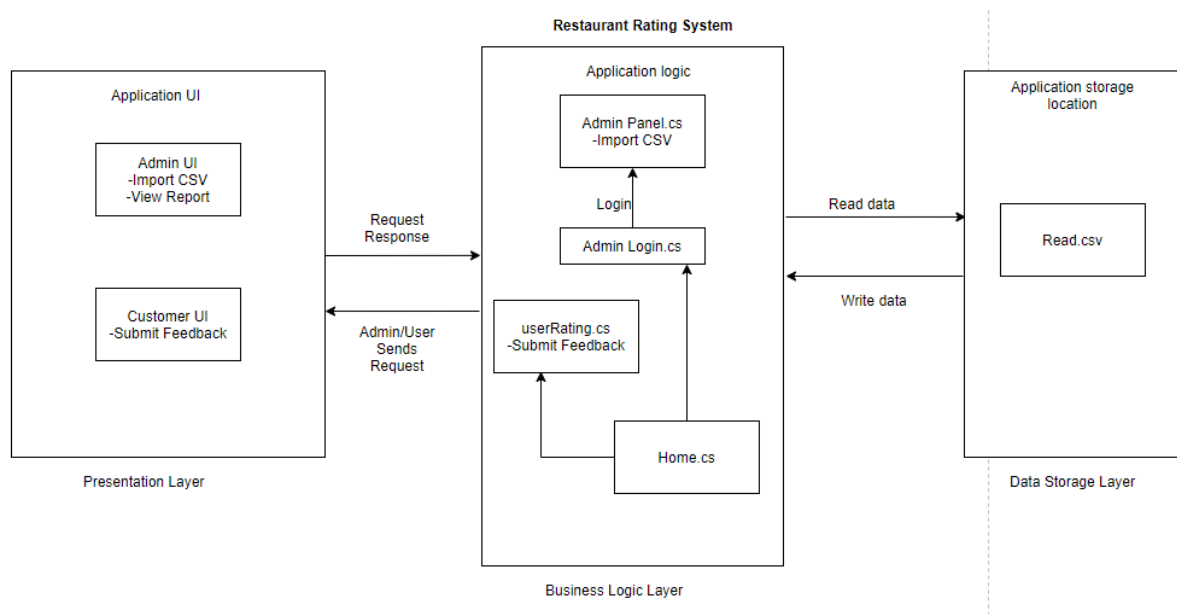

Test description: importing CSV file from given path	
Output	Grid get populated with csv file data
Purpose	For the admin to view feedback data
Result	Pass

The screenshot shows a web application window titled "AdminPanel" with a menu bar containing "File" and "View". The main content area is titled "Analyse And View" and displays a table with the following data:

	Criteria	Excellent	Good	Average	Dissatisfied
▶	Food Quality	True	False	False	False
	Staff Friendliness	False	True	False	False
	Cleanliness	True	False	False	False
	Odrder Accuracy	False	True	False	False
	Restaurant Ambi...	False	False	False	False
	Value For Money	False	False	False	True
	Food Quality	True	False	False	False
	Staff Friendliness	False	True	False	False
	Cleanliness	False	False	True	False

4. Software Architecture Diagram

5. Methods and Classes

These are the following methods and classes being used.

5.1. fbClass.cs

`fbExportClass` (Class)– This class is used to contain variables that are to be exported on the .csv file.

5.2. Home.cs

`submit_btn_Click` (Method/button) – It takes user to the `userRating.cs` file.

`adminToolStripMenuItem_Click` (Method/ Menu strip item) – It takes user to `AdminLogin.cs` file.

`exitToolStripMenuItem_Click` (Method/ Menu strip item) – When clicked it exits the whole program.

5.3. userRating.cs

`back_btn_Click` (Method/ Button) – Takes user back to `Home.cs` when clicked.

`exitToolStripMenuItem_Click` (Method/Button) – Exits the whole program.

`submit_btn_Click` (Method/Button) – Gets datagrid's value and writes in a csv file.

`loadRatingOpt` (Method) – Adds first column of the datagrid when the program runs

`userRating_Load` (Method) – Is executed at the beginning of `userRating.cs` file. Hence used to trigger `loadRatingOpt` and gets date and time.

5.4. AdminLogin.cs

`login_cancel_btn_Click` (Method/ Button) – closes `AdminLogin.cs` file when clicked

`login_btn_Click` (Method/ Button) – Takes user to `AdminPanel.cs` file only if the username and password is typed correct.

5.5 AdminPanel.cs

`importCSVToolStripMenuItem_Click` (Method/ Menu strip item) – Gets the source for datagrid, Also calls `feedbackReader` Method.

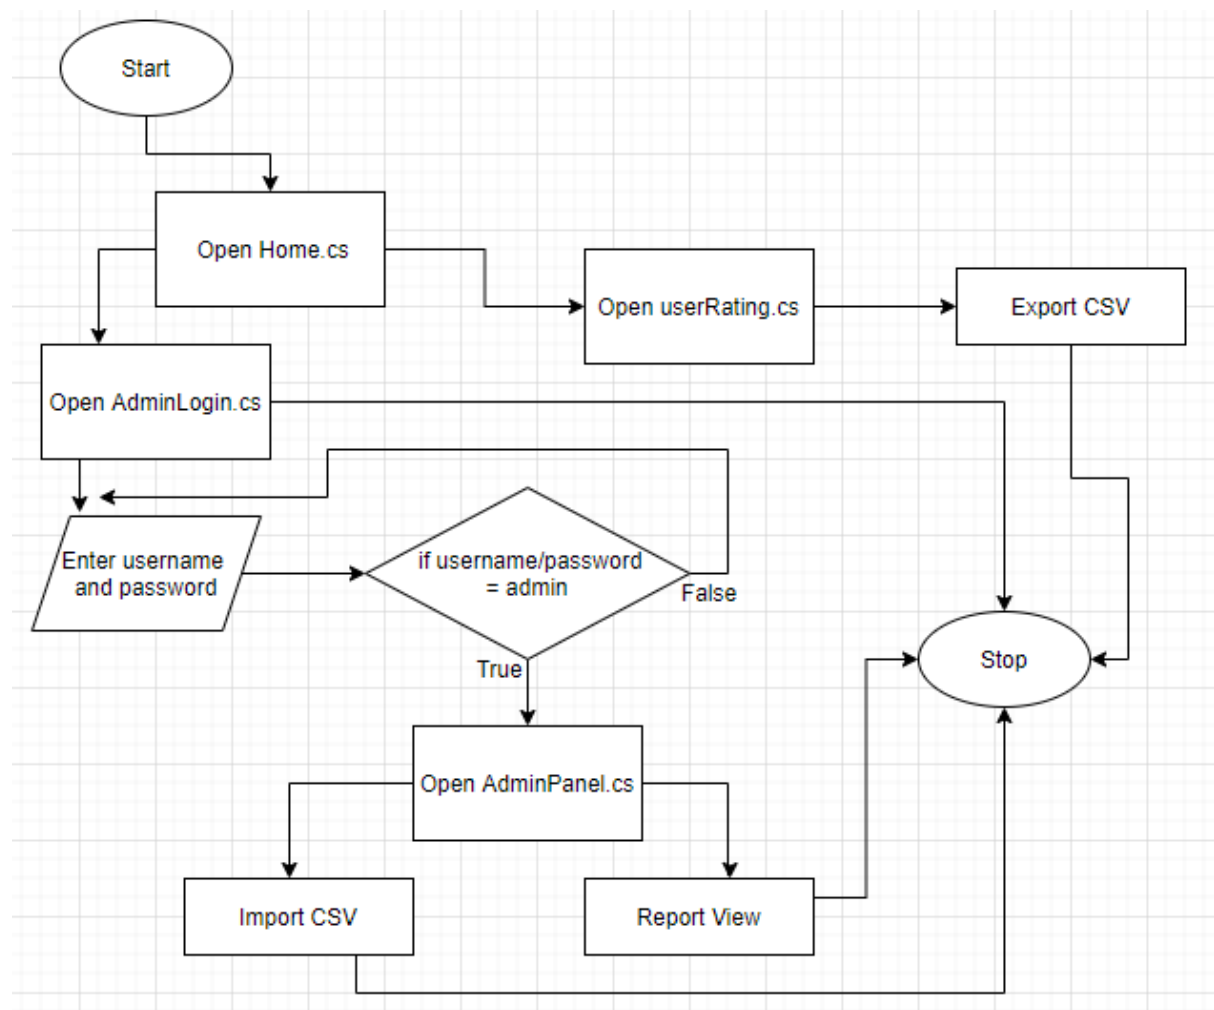

`feedbackReader` (Method) – Converts the csv file into datagrid format using list of `fbClass`.

`gridLoop` (Method) - It counts the number of true and false of each criteria and also its feedbacks and returns a 2D array.

`reportToolStripMenuItem_Click` (Method/Menu strip item) – `gridLoop` and the returned 2D array is used to display data in numeric view.

`fbClass` (Class) - Used as a collection of variable for the list to be displayed in datagrid.

6. Flow chart

7. Data Structure and Algorithm description

The data structures I have used are list which was used to get the csv file using readline and each line was separated into lists and then displayed on the datagrid.

Also I have made an 2D array for the report generation part.

8. Conclusion

To conclude, this is my project for the Restaurant Rating System. Not only that I learned about C# but I learned many things on the way. Like even I got an idea of rating system working mechanism. Also the difficulties I faced in certain algorithms to work. All these helped me gain good experience.

I personally found C# very difficult to implement. Even the IDE visual studio was very resource heavy and complex for me. I think I am just not used to the environment of it. There are many ways and many namespace, library, etc. But that is also a good thing as if one way is not working there is always another way to look for in C#. So I think if one can master C# with all namespace and libraries it is very beneficial.
